Pat, Chris & Allen,

Attached is a copy of revised Permit AP4953-1148.

We (NDEP-BAPC) were able to accommodate your request regarding like-kind engine replacements or "swap-outs" and to resolve most other issues. However, we ultimately determined that the CEMS are necessary to preserve NOx increment in the Tracy basin and ensure compliance with the 249.0 tpy CO emission cap.

I'll forward you an e-copy of our response to your comments and supplemental information.

Larry
