AUTHORITY: §§1-7, NRS 445B.210.

A REGULATION relating to air quality; defining the term “best available retrofit technology” for certain purposes relating to regional haze; setting the standards for emission limitation for that technology for certain sources; and providing other matters properly relating thereto.

**Section 1.** Chapter 445B of NAC is hereby amended by adding thereto the provisions set forth as sections 2, 3 and 4 of this regulation.

**Sec. 2.** *“Best available retrofit technology” means an emission limitation based on the degree of reduction achievable through the application of the best system of continuous emission reduction for each pollutant that is emitted by an existing stationary facility as defined in 40 C.F.R. § 51.301.*

**Sec. 3.** *The emission limitation for BART must be established on a case-by-case basis, taking into consideration:*

- 1. The technology available;*
- 2. The costs of compliance;*
- 3. The energy and nonair quality environmental impacts of compliance;*
- 4. Any pollution control equipment in use or in existence at the source or unit;*

5. The remaining useful life of the source or unit; and

6. The degree of improvement in visibility which may reasonably be anticipated to result from the use of such technology.

Sec. 4. 1. [To determine BART for the requirements of a regional haze program set forth in 40 C.F.R. § 51.308, the] The sources listed below must install, operate and maintain the following control measures which constitute BART and must not emit or cause to be emitted NO<sub>x</sub>, SO<sub>2</sub>, or PM<sub>10</sub> in excess of the following limits:

(a) For power-generating units numbers 1 and 2 of [Sierra Pacific Company's] NV

Energy's Fort Churchill Generating Station, located in hydrographic area 108:
