Classification Proposed Adopted By Agency Temporary Emergency Permanent

R155-17: This permanent regulation revises NAC 445A. The modified regulations pertain to wastewater operator certification, plants for sewage treatment classification, and injection wells in a permit's area of review. The NDEP modified requirements for the certification and renewal of wastewater operator certifications; added ascending education requirements; added continuing education units for renewals; and increased initial, renewal, and reciprocity fees. The Division also modified the classification levels of plants for wastewater treatment, removing plant capacity as a key factor in plant classifications and base plant classification of treatment technology.

Also modified was NAC 445A.867(6), in the Underground Injection Control program (UIC), requiring all wells within an area of review of a UIC permit to have proper corrective actions completed as opposed to addressing only injection wells.
