Classification Proposed Adopted By Agency Temporary Emergency Permanent

Brief description of action: Regulation R141-06 revises provision governing the stabilization of spent ore. This permanent regulation amends NAC 445A.430 by focusing stabilization of spent ore on effluent chemistry levels rather than dictating a particular stabilization action or method (e.g., rinsing).

The language in the regulation reflects recent changes and advancements in spent ore stabilization methods and technologies. The changes in the regulation are designed to broaden spent ore stabilization options for spent ore that has been left on pads, or which will be remove from pads. The amended regulation will continue to require that spent ore effluent demonstrate Cyanide and pH stability levels in accordance with existing regulatory limits imposed by the Nevada Division of Environmental Protection.

Authority citation other than 233B: §1, NRS 445A.425 and 445A.465.
