Re: Regulation P2008-15: Application of Air Pollution Control Best Available Retrofit Technology & Emission Limitations for Major Electric Generating Units

Dear Ms. Corp:

Enclosed for "drafting" by the LCB Legal Division is a proposed permanent regulation that would amend NAC 445B.

This regulation would add a requirement for certain electric generating units to install best available retrofit technology and comply with emission limitations for NOx, SO2 and PM10. These requirements apply to Sierra Pacific Resources' Fort Churchill and Tracy Generating Stations in the Mason Valley and the Truckee River Basins, respectively; as well as Nevada Power Company's Reid Gardner Generating Station in the California Wash northeast of Las Vegas; and Southern California Edison's Mohave Generating Station near Laughlin. This proposed regulation is necessary to comply with the federal Regional Haze Regulations promulgated in July 1999 (64FR35714).

If you have any questions about this regulation please contact Ms. Adele Malone (687-9356).

Sincerely,

John B Walker
