RE: Revised Application (v7.0) for the MediWaste Medical Waste Treatment Facility, Nye County, Permit #SW1900REV00. Comments on Application v7.0.

Dear Ryan Oganessian:

The Nevada Division of Environmental Protection - Bureau of Sustainable Materials Management (NDEP-BSMM) received a revised Application (v7.0) on January 14, 2026, dated January 14, 2026, for the MediWaste Medical Waste Treatment Facility (SW1900). The application was prepared by Trinity Consultants on behalf of MediWaste Disposal LLC.

Comments resulting from the NDEP-BSMM's review of the application are provided below:

1. Fire Suppression Plan

- a. In section "7.2 Fire Suppression", the application states that Building 1 is outfitted with a sprinkler system, but there is no mention of a sprinkler system or other fire suppressing system within Building 2 – where the 7 pyrolysis units are housed. Please clarify whether the fire suppression system in place or to be designed for Building 2.

2. Schedule of Compliance Items – Financial Assurance

- a. The NDEP-BSMM is placing the Financial Assurance matter as schedule of compliance (SOC) items inside the permit under Section "G Compliance Schedule" of the DRAFT Permit attached.

3. Schedule of Compliance Items – Ash Sampling Frequency Plan

- a. The NDEP-BSMM requires that MediWaste submit an Ash Sampling Frequency Plan, such as the one submitted in the v5.0 Application from MediWaste.
- b. For guidance regarding the SOC item, the NDEP-BSMM requires that any retention sample cannot be combined with other retention samples and then statistically sampled together to obtain a potentially diluted representative sample. Each retention sample must be tested individually from each pyrolysis processing unit. If any retention sample that is tested or retested contains hazardous constituents, or is characteristically hazardous per 40 CFR 261.3(a), please describe how MediWaste will ensure proper disposal of the hazardous waste. Furthermore, please describe how MediWaste will prevent comingling

of hazardous waste pyrolysis batches with solid waste batches, per 40 CFR 261.3(a) and 40 CFR 261.3(b).

- c. Please see an example of a sampling frequency plan drafted by the NDEP-BSMM below in Table 1.

Table 1. Hydrated Ash Waste Sampling Schedule Per Pyrolysis Unit (TBD)

Stage	Sampling Frequency	Duration*	Reporting
I	Twice Daily (once per 12 hours)	One Week (7 days, 14 samples minimum)	Once the results for a stage are available, a report including the sampling results and analysis will be submitted to the NDEP-BSMM within fourteen (14) business days of receipt.
II	Weekly	Three (3) months	
III	Monthly	Three (3) months	
IV	Quarterly	5 years (20 quarters)	
V	After the first 5 years, the sample frequency will be discussed with the authority.		

*Sample frequency and duration are minimums

Any exceedances of permitted hazardous waste limits in a sample will revert the facility back to the previous stage and sampling frequency.

Please review and provide comments on the attached DRAFT Permit and Factsheet documents by **April 3, 2026** for further action by the NDEP-BSMM. If the NDEP-BSMM has not received comments by April 3, 2026 then the NDEP-BSMM will proceed with the public comment period for the permit.

Additionally, please revise and submit the application with the proposed Ash Sampling Frequency Plan within the timeline set by the SOC item of the permit.
