

**PETITION P2019-03 – 07/19/2019 (CADMIUM)**

**PROPOSED PERMANENT REGULATION OF THE  
NEVADA STATE ENVIRONMENTAL COMMISSION**

AUTHORITY: §§1-318, NRS 445A.425 and 445A.520.

A PERMANENT REGULATION relating to water quality; making various changes in provisions that establish standards for water quality; and providing other matters properly relating thereto.

**PETITION 2019-03** Changes to the Nevada Administrative Code revising the Nevada water quality regulations to adopt USEPA's 2016 criterion for cadmium in the Water Quality Standards NAC 445A.1236

**Proposed Revisions:**

The proposed updates to the NAC are shown below with **deletions in red and strikeout** and *additions in blue*:

**Legislative Counsel Bureau Drafters Note: Instructions for Petition P2019-03**

**Standards for Surface Water Quality**

**Proposed Revisions:**

**NAC 445A.1236** Standards for toxic materials applicable to designated waters. ([NRS 445A.425](#), [445A.520](#))

1. Except for waters which have site-specific standards for toxic materials or as otherwise provided in this section, the standards for toxic materials prescribed in subsection 2 are applicable to the waters specified in [NAC 445A.123](#) to [445A.2234](#), inclusive. The following criteria apply to this section:

(a) If the standards are exceeded at a site and are not economically controllable, the Commission will review and may adjust the standards for the site.

(b) If a standard does not exist for each designated beneficial use, a person who plans to discharge waste must demonstrate that no adverse effect will occur to a designated beneficial use. If the discharge of a substance will lower the quality of the water, a person who plans to discharge waste must meet the requirements of [NRS 445A.565](#).

(c) If a criterion is less than the detection limit of a method that is acceptable to the Division, laboratory results which show that the substance was not detected shall be deemed to show compliance with the standard unless other information indicates that the substance may be present.

2. The standards for toxic materials are:

Chemical	Municipal or Domestic Supply (µg/l)	Aquatic Life <sup>(1,2)</sup> (µg/l)	Irrigation (µg/l)	Watering of Livestock (µg/l)

Footnotes:

- (1) One-hour average and 96-hour average concentration limits may be exceeded only once every 3 years. See reference a.
- (2) "Hardness" is expressed as mg/L CaCO<sub>3</sub>; and "e" refers to the base of the natural logarithm whose value is 2.718.
- (3) The standards for metals are expressed as total recoverable, unless otherwise noted.
- (4) This standard applies to the dissolved fraction.
- (5) This standard is expressed as free cyanide.
- (6) This standard applies to DDT and its metabolites (i.e., the total concentration of DDT and its metabolites should not exceed this value).
- (7) The standard for trihalomethanes (TTHMs) is the sum of the concentration of bromodichloromethane, dibromochloromethane, tribromomethane (bromoform) and trichloromethane (chloroform). See reference b.
